Professional Summary

IT operations and technical support professional with 2+ years of experience supporting a global client account in ticket-driven, SLA-governed environments. Experienced in incident and ticket lifecycle management, technical troubleshooting, root-cause analysis, escalation coordination, documentation, and shift-based operations. Completed cybersecurity training in security monitoring, alert investigation, SIEM/EDR/NDR fundamentals, incident response, phishing analysis, and threat intelligence, with a networking foundation (TCP/IP, DNS, DHCP, VPN, LAN/WAN) and training exposure to Nmap, Wireshark, and Burp Suite. Built SentinelTrace, a Python-based SSH authentication log monitoring and threat detection lab.

Technical Skills

- **Security Operations (SOC):** Security Monitoring Concepts, SIEM (Security Information and Event Management) Fundamentals, EDR/NDR (Endpoint and Network Detection and Response) Fundamentals, Alert Analysis, Initial Incident Triage, Incident Classification, Incident Documentation, Escalation, Shift Handover
- **Threats and Investigation:** Common Cyber Threats, Vulnerabilities and Attack Techniques, Phishing Investigation Concepts, Threat Intelligence Fundamentals, Authentication Attack Patterns, Vulnerability Assessment Fundamentals
- **Security Domains:** Endpoint Security, Identity and Access Management (IAM) Concepts, Network Security, Cloud Security Fundamentals, Email Security, Data Confidentiality
- **Frameworks and Incident Response:** Incident Response Lifecycle, Incident Response Methodologies, NIST Cybersecurity Framework (CSF) Fundamentals, ISO/IEC 27001 Fundamentals, Security Best Practices
- **Networking:** TCP/IP, IPv4/IPv6, DNS, DHCP, VPN, LAN/WAN, IP Addressing, Routers and Switches, Network Troubleshooting

- **Tools and Technical Exposure:** Nmap, Wireshark, Burp Suite (training exposure); Python (security log analysis project); Linux/OpenSSH authentication logs
- **IT Operations:** Incident Tracking, Ticket Lifecycle Management, Root Cause Analysis, Technical Troubleshooting, Escalation Management, SLA Management, SOP Adherence, Process Documentation, Cross-Functional Coordination, SAP

Professional Experience

Software Engineer - Technical Support | LTM (LTIMindtree) | Aug 2024 - Nov 2026

- Support a global client account in a ticket-driven, SLA-governed environment, monitoring assigned cases from intake through resolution and maintaining ownership of open issues.
- Perform initial technical analysis and structured troubleshooting, gather relevant details, identify likely root causes, and determine appropriate resolution or escalation paths.
- Track cases throughout the ticket lifecycle, coordinate with relevant technical teams, and follow up on outstanding issues to support timely resolution.
- Escalate complex or technically specialized issues to the appropriate teams with relevant troubleshooting context; communicate case status and outcomes to users and stakeholders.
- Follow SOPs, escalation procedures, documentation requirements, and quality standards while managing a high-volume case queue against SLA commitments.
- Work in a shift-based, round-the-clock operations environment, supporting continuity across operational periods.
- Handle account, subscription, licensing, payment, refund, and order-related queries, including order processing through SAP.

GO-AI Associate | Amazon | Oct 2023 - Jan 2024

- Performed content annotation and quality reviews supporting Trust and Safety operations, applying defined policy guidelines to maintain review accuracy and consistency.
- Handled sensitive review material in accordance with data-handling and confidentiality requirements.
- Supported data quality and process integrity in a high-volume operations environment through consistent application of review procedures.

Projects

SentinelTrace - Python-Based SSH Authentication Log Monitoring and Threat Detection Lab

- Developed an independent lab tool to parse Linux OpenSSH authentication logs and identify suspicious authentication patterns for first-level SOC triage.
- Implemented detections for repeated SSH authentication failures (five or more attempts within five minutes), successful authentication following repeated failures, and remote SSH login to the root account.
- Generated prioritized alerts and investigation output in JSON, CSV, and HTML formats to support review and security documentation.
- Validated the lab against eight synthetic authentication events; generated three rule-based alerts (one Critical and two High) and passed all five included unit tests.
- Technologies: Python, Linux/OpenSSH authentication logs, regular expressions, JSON, CSV, HTML, unit testing.
- Live portfolio: https://gutnukusandhyarani.github.io/sandhya-rani-portfolio/
- Repository: https://github.com/Gutnukusandhyarani/sandhya-rani-portfolio

Certifications and Training

Cybersecurity Certification | Frontlines Edutech (FLM) | Completed Aug 2026

- Coverage: cybersecurity fundamentals, security monitoring, SIEM/EDR/NDR concepts, alert investigation and incident triage, common threats and vulnerabilities, phishing investigation, threat intelligence, endpoint/identity/network/cloud/email security, incident response methodologies, and security framework fundamentals.
- Ethical hacking basics with Nmap, Wireshark, and Burp Suite.

Networking Training | LTM (Internal)

- Coverage: IPv4/IPv6, IP addressing, TCP/IP, DNS, DHCP, VPN, LAN/WAN, routers, switches, basic network security concepts, and troubleshooting connectivity, latency, packet-loss, and network communication issues.

Education

Bachelor of Technology (B.Tech), Electronics and Communication Engineering

Gokaraju Ranga Raju Institute of Engineering and Technology | 2023 | 88%

Languages

English, Hindi, Telugu
